

EXP NO: 4

Web Form with Servlet to Capture and Display User's Name and Age

AIM:

Create a web form that accepts a user's name and age. Write a Servlet to process the form data and display it back on the browser.

CODE:

Userdetails.html

```
<!DOCTYPE html>
<html>
<head>
<meta charset="ISO-8859-1">
<title>Insert title here</title>
</head>
<body>
<form action="/UserValidate">
  <label for="name">User Name</label>
  <input type="text" id="name" name="name" placeholder="Enter Your Name" required><br><br>

  <label for="age">Age</label>
  <input type="number" id="age" name="age" placeholder="Enter Your Age"><br><br>

  <button type="submit">Submit</button>
</form>
</body>
</html>
```

UserValidate.java

```
package com.karthick.servlet;
```

```
import java.io.IOException;
```

```

import java.io.PrintWriter;

import javax.servlet.ServletException;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;

/**
 * Servlet implementation class UserValidate
 */
@WebServlet("/UserValidate")
public class UserValidate extends HttpServlet {
    private static final long serialVersionUID = 1L;

    /**
     * @see HttpServlet#HttpServlet()
     */
    public UserValidate() {
        super();
        // TODO Auto-generated constructor stub
    }

    /**
     * @see HttpServlet#doGet(HttpServletRequest request, HttpServletResponse response)
     */
    protected void doGet(HttpServletRequest request, HttpServletResponse response) throws
ServletException, IOException {
        String user=request.getParameter("name");
        int age=Integer.parseInt(request.getParameter("age"));

        PrintWriter pw=response.getWriter();
        pw.println("User Name: "+ user);
        pw.println("Age: "+ age);
    }

}

```

OUTPUT:

The screenshot shows the Eclipse IDE with the 'userdetails.html' file open in the editor. The file contains HTML code for a user validation form. The Project Explorer on the left shows the project structure, including the 'src/main/webapp' directory. The Console window at the bottom shows the output of the application, indicating that the server is running successfully.

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4 <meta charset="ISO-8859-1">
5 <title>Insert title here</title>
6 </head>
7 <body>
8 <form action="/UserValidate">
9   <label for="name">User Name</label>
10  <input type="text" id="name" name="name" placeholder="Enter Your Name" required><br><br>
11
12  <label for="age">Age</label>
13  <input type="number" id="age" name="age" placeholder="Enter Your Age"><br><br>
14
15  <button type="submit">Submit</button>
16 </form>
17 </body>
18 </html>
```

The screenshot shows the Eclipse IDE with the 'UserValidate.java' file open in the editor. The file contains the Java code for the user validation servlet. The Project Explorer on the left shows the project structure, including the 'src/main/java' directory. The Console window at the bottom shows the output of the application, indicating that the server is running successfully.

```
1 package com.karthick.servlet;
2
3 import java.io.IOException;
4 import java.io.PrintWriter;
5
6 import javax.servlet.ServletException;
7 import javax.servlet.annotation.WebServlet;
8 import javax.servlet.http.HttpServlet;
9 import javax.servlet.http.HttpServletRequest;
10 import javax.servlet.http.HttpServletResponse;
11
12 /**
13  * Servlet implementation class UserValidate
14  */
15 @WebServlet("/UserValidate")
16 public class UserValidate extends HttpServlet {
17     private static final long serialVersionUID = 1L;
18
19     /**
20      * @see HttpServlet#HttpServlet()
21      */
22     public UserValidate() {
23         super();
24         // TODO Auto-generated constructor stub
25     }
26
27     /**
28      * @see HttpServlet#doGet(HttpServletRequest request, HttpServletResponse response)
29      */
30     protected void doGet(HttpServletRequest request, HttpServletResponse response) throws ServletException, IOException {
31         String username=request.getParameter("name");
32         int age=Integer.parseInt(request.getParameter("age"));
33
34         PrintWriter pw=response.getWriter();
35         pw.println("User Name: "+ username);
36         pw.println("Age: "+ age);
37     }
38 }
39
40
```

RESULT:

Thus, the web form is Implemented Successfully using html and Servlet.
